Title:

Enabling technologies for supporting the population with accessibility needs

Description:

It is common for the elderly and people with accessibility needs to choose to live alone or with family as they wish, as long as it is safe, comfortable and cost-efficient. To this end, appropriate technologies and ICT, and standards-abiding services can be offered, thus normalizing the everyday activities of this target group.

Contributions are invited on studies or explorations of approaches that are attempting wide inclusion - both technologically and societally.
